

Simple to Install & Use, Reliable & Productive

With the longer life and reliability of the nipple, it ensures excellent results for poultry growth

Provides a 26 degree movement, with a new pin and ball assembly that produces less resistance to lateral displacement of the pin, allowing a total reduction of 60% of the effort for the poultry to extract water.

With the modern and simple design, it can be installed with just one click. Made with highest grade materials for increased life and reliability.

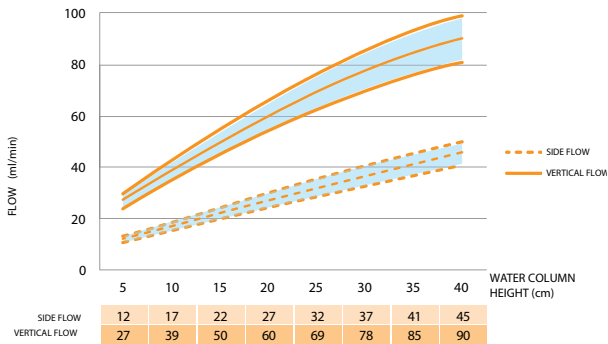

More hydrated poultry, increased weight gain and improved animal welfare with the ease of lateral movement of the pin.

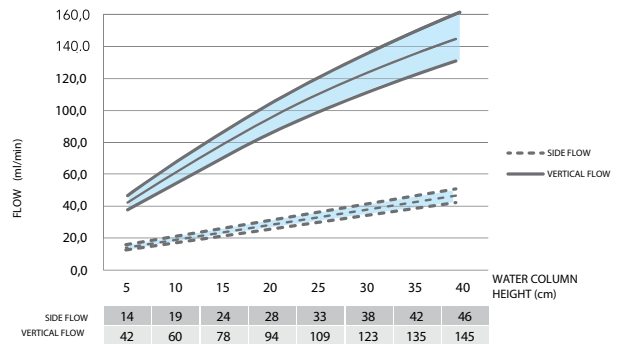

One Click Breeder

- The nipple assembly is built-in with a locking mechanism to the watering pipe. With just a simple twist, the nipple is snapped on and secured onto the pipe
- Coupled in between the pipe and nipples, an o-ring seals the water preventing leaks
- The nipple sealing system is performed by ball, which in its natural spin generates uniform wear, ensuring longer life of the nipple insert without changing its flow characteristics
- Nipple body color coded in orange for high flow and grey for ultra flow

High Flow Nipple

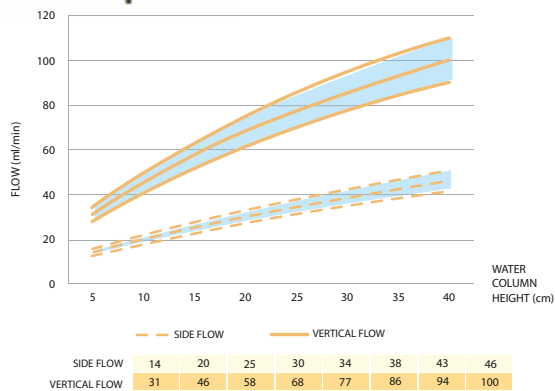

Ultra Flow Nipple

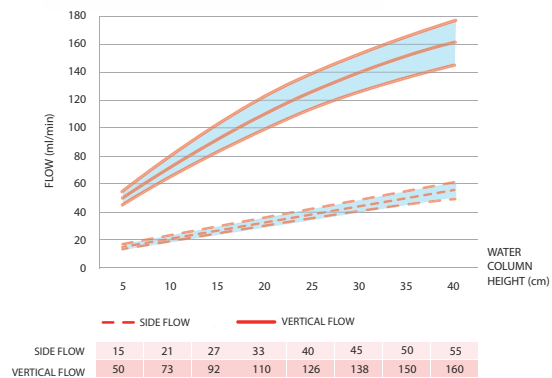

One Click Broiler

- Increased productivity: the new internal design helps even the lightest chick to extract the ideal amount of drinking water in the first days of life more easily
- Coupled in between the pipe and nipples, an o-ring seals the water preventing leaks
- New internal parts, with innovative design and improved durability
- Total travel for lateral displacement of 26 degrees lower pin

High Flow Nipple

Ultra Flow Nipple
